## Characteristics

Pro Industrial DTM Acrylic coating is an interior-exterior, water based, corrosion resistant acrylic coating for light to moderate industrial use. Designed for new construction or maintenance use and can be used directly over prepared substrates.

- Chemical Resistant
- Corrosion resistant
- Fast dry
- Flash rust-early rust resistance
- Suitable for use in USDA inspected facilities

### Recommended Spreading Rate per coat:

| Wet mils: | 6.0-10.0 |
| Dry mils: | 2.4-4.0 |

### Theoretical Coverage:

| 641 sq. ft. per gallon | @ 1 mil dry |

Approximate spreading rates are calculated on volume solids and do not include any application loss.

### Drying Schedule @ 6.0 mils wet, @ 50% RH:

<table>
<thead>
<tr>
<th>Drying, recoat times</th>
<th>Temperature</th>
</tr>
</thead>
<tbody>
<tr>
<td>@50°F</td>
<td>1 hour</td>
</tr>
<tr>
<td>@77°F</td>
<td>20 minutes</td>
</tr>
<tr>
<td>@110°F</td>
<td>10 minutes</td>
</tr>
</tbody>
</table>

### Tinting with CCE only:

<table>
<thead>
<tr>
<th>Base</th>
<th>oz. per gallon</th>
<th>Strength</th>
</tr>
</thead>
<tbody>
<tr>
<td>Extra White</td>
<td>0-6</td>
<td>SherColor</td>
</tr>
<tr>
<td>Deep Base</td>
<td>6-12</td>
<td>SherColor</td>
</tr>
<tr>
<td>Ultradeep Base</td>
<td>10-12</td>
<td>SherColor</td>
</tr>
<tr>
<td>Real Red</td>
<td>0-12</td>
<td>SherColor</td>
</tr>
<tr>
<td>Vivid Yellow</td>
<td>0-14</td>
<td>SherColor</td>
</tr>
</tbody>
</table>

### Extra White B66W01151 (may vary by color)

**V.O.C. (less exempt solvents):** un reducer less than 50 grams per litre; 0.42 lbs. per gallon

### Volume Solids:

| 40 ± 2% |

### Weight Solids:

| 51 ± 2% |

### Weight per Gallon:

| 10.20 lb |

### Flash Point:

| N/A |

### Vehicle Type:

| Acrylic |

### Shelf Life:

| 36 months, unopened |

## Compliance

As of 05/14/2021, Complies with:

- OTC
- OTC Phase II
- S.C.A.Q.M.D.
- CARB
- CARB SCM 2007
- CARB SCM 2020
- Canada
- LEED® v4 & v4.1 Emissions
- LEED® v4 & v4.1 V.O.C.
- EPD-NSF® Certification
- MIR-Manufacturer Inventory
- NSF® Certification

### Application

<table>
<thead>
<tr>
<th>Temperature</th>
<th>Relative humidity:</th>
</tr>
</thead>
<tbody>
<tr>
<td>minimum</td>
<td>50°F / 10°C</td>
</tr>
<tr>
<td>maximum</td>
<td>110°F / 43°C</td>
</tr>
</tbody>
</table>

At least 5°F above dew point

### Reducer

Water

### Airless Spray:

- **Pressure:** 1500 p.s.i.
- **Hose:** 1/4 inch I.D.
- **Tip:** .017 -.021 inch
- **Filter:** 60 mesh

### Conventional Spray:

- **Gun:** Binks 95
- **Fluid Nozzle:** 66
- **Air Nozzle:** 63 PB
- **Atomization Pressure:** 50 p.s.i.
- **Fluid Pressure:** 10-20 p.s.i.

### Reduction

- **Not recommended**
- **Brush:** Nylon-polyester

### Roller Cover

1/4-3/8 inch woven

If specific application equipment is listed above, equivalent equipment may be substituted.

Due to this product’s fast dry performance, brushing should be limited to small areas where a wet edge can be maintained

Apply paint at the recommended film thickness and spreading rate as indicated. Application of coating above maximum or below minimum recommended spreading rate may adversely affect coating performance.

When using spray application, use a 50% overlap with each pass of the gun to avoid holidays, bare areas, and pinholes. If necessary, cross spray at a right angle.

Overspray landing on hot surfaces may adhere to these surfaces. Immediately remove overspray from hot surfaces before adhesion occurs.

## Specifications

### Steel*

- 2 coats Pro Industrial DTM Acrylic

### Steel:

- 1 coat Pro Industrial Pro-Cryl Primer
- or Pro Industrial DTM Primer/Finish
- or Kem Bonds HS
- or Zinc Clad Primer
- 1-2 coats Pro Industrial DTM Acrylic

### Aluminum:

- 1-2 coats Pro Industrial DTM Acrylic

### Aluminum (Water Based Primer):

- 1 coat Pro Industrial Pro-Cryl Primer
- 1-2 coats Pro Industrial DTM Acrylic

### Concrete Block (CMU):

- 1 coat Pro Industrial Heavy Duty Blockfiller
- or Luxon Acrylic Block Surfacer
- 1-2 coats Pro Industrial DTM Acrylic

### Concrete-Masonry:

- 1 coat Luxon Concrete & Masonry Primer (if needed)
- or Luxon Conditioner (if needed)
- 2 coats Pro Industrial DTM Acrylic

### Drywall:

- 1 coat ProMar 200 Zero V.O.C. Primer
- 1-2 coats Pro Industrial DTM Acrylic

### Galvanizing:

- 2 coats Pro Industrial DTM Acrylic

### Pre-Finished Siding: (Baked-on finishes)

- 1 coat Bond-Plex Waterbased Acrylic
- or DTM Bonding Primer
- 1-2 coats Pro Industrial DTM Acrylic

### Wood, exterior:

- 1 coat Exterior Wood Primer
- 1-2 coats Pro Industrial DTM Acrylic

### Wood, interior:

- 1 coat Premium Wall & Wood Primer
- 1-2 coats Pro Industrial DTM Acrylic

*Application of coating on unprimed steel may cause pinpoint rusting. Safety Colors, Deep Base, and ultradeep colors require a prime coat for maximum durability, adhesion, and corrosion protection.

### Zinc Primers - Refer to the zinc technical data sheet application procedures and performance tips prior to topcoating.
**SURFACE PREPARATION**

**WARNING!** Removal of old paint by sanding, scraping or other means may generate dust or fumes that contain lead. Exposure to lead dust or fumes may cause brain damage or other adverse health effects, especially in children or pregnant women. Controlling exposure to lead or other hazardous substances requires the use of proper protective equipment, such as a properly fitted respirator (NIOSH approved) and proper containment and cleanup. For more information, call the National Lead Information Center at 1-800-424-LEAD (in US) or contact your local health authority.

Do not use hydrocarbon solvents for cleaning. Remove all surface contamination by washing with an appropriate cleaner, rinse thoroughly and allow it to dry. Existing peeled or checked paint should be scraped and sanded to a sound surface. Glossy surfaces should be sanded dull. Stains from water, smoke, ink, or similar materials, etc. should be sealed with the appropriate primer-sealer. Recognize that any surface preparation short of total removal of the old coating may compromise the service length of the system.

**Iron & Steel** - Minimum surface preparation is Hand Tool Clean per SSPC-SP2. Remove all oil and grease from surface per SSPC-SP1. For better performance, use Commercial Blast Cleaning per SSPC-SP6. Primer recommended for best performance.

**Aluminum** - Remove all oil, grease, dirt, oxide and other foreign material per SSPC-SP1.

**Galvanizing** - Allow to weather a minimum of six months prior to coating. Solvent Clean per SSPC-SP1. When weathering is not possible, or the surface has been treated with chromates or silicates, first Solvent Clean per SSPC-SP1 and apply a test patch. Allow paint to dry at least one week before testing adhesion. If adhesion is poor, brush blasting per SSPC-SP16 is necessary to remove these treatments. Rusted galvanizing requires a minimum of Hand Tool Cleaning per SSPC-SP2, prime the area the same day as cleaned.

**Concrete Block** - Surface should be thoroughly clean and dry. Air, material and surface temperatures must be at least 55°F (12.7°C) before filling. Use Pro Industrial Heavy Duty Block Filler or Loxon Acrylic Block Surfacer. The filler must be thoroughly dry before topcoating.

**Masonry** - All masonry must be free of dirt, oil, grease, loose paint, mortar, masonry dust, etc. Clean per SSPC-SP13, Nace 6, ICRI No. 310.2R, CSP 1-3. Poured, troweled, or tilt-up concrete, plaster, mortar, etc. must be thoroughly cured at least 30 days at 75°F. Form release compounds and curing membranes must be removed by brush blasting. Brick must be allowed to weather for one year prior to surface preparation and painting. Prime the area the same day as cleaned.

Weathered masonry and soft or porous cement board must be brush blasted or power tool cleaned to remove loosely adhering contamination and to get to a hard, firm surface. Apply one coat Loxon Conditioner, following label recommendations.

**Wood** - Surface must be clean, dry, and sound. Prime with recommended primer. No painting should be done immediately after a rain or during foggy weather. Knots and pitch streaks must be scraped, sanded and spot primed before full coat of primer is applied. All nail holes or small openings must be properly caulked. Sand to remove any loose or deteriorated surface wood and to obtain a proper surface profile.

**SURFACE PREPARATION**

Previously Painted Surface - If in sound condition, clean the surface of all foreign material. Smooth, hard or glossy coatings should be dulled by abrading the surface. Apply a test area, allowing paint to dry one week before testing adhesion. If adhesion is poor, additional abrading of the surface and/or removal of the previous coating may be necessary. Retest surface for adhesion. If paint is peeling or badly worn, repair the surface to sound substrate and treat as a new surface as above. Recognize that any surface preparation short of total removal of the old coating may compromise the service length of the system.

Mildew - Prior to attempting to remove mildew, it is always recommended to test any cleaner on a small, inconspicuous area prior to use. Bleach and bleaching type cleaners may damage or discolor existing paint films. Bleach alternative cleaning solutions may be advised. Mildew may be removed before painting by washing with a solution of 1 part liquid bleach and 3 parts water. Apply the solution to the mildewed area. Allow the solution to remain on the surface for 10 minutes. Rinse thoroughly with water and allow the surface to dry before painting. Wear protective eyewear, waterproof gloves, and protective clothing. Quickly wash off any of the mixture that comes in contact with your skin. Do not add detergents or ammonia to the bleach-water solution.

**PERFORMANCE**

**SAFETY PRECAUTIONS**

Before using, carefully read CAUTIONS on label. Refer to the Safety Data Sheets (SDS) before use.

FOR PROFESSIONAL USE ONLY.

Published technical data and instructions are subject to change without notice. Contact your Sherwin-Williams representative for additional technical data and instructions.

**CLEANUP INFORMATION**

Clean spills, spatters, hands and tools immediately after use with soap and warm water. After cleaning, flush spray equipment with compliant cleanup solvent to prevent rusting of the equipment. Follow manufacturer’s safety recommendations when using solvents.
