# Hotline® Fast Dry Latex

**Waterborne Traffic Marking Paint**

TM2152 White, TM2153 Yellow, TM2221 Black

## Characteristics

**Hotline® Fast Dry Latex** are very fast drying waterborne paints for use in marking parking lots, airports, and roads. They may be applied ambient airless or conventional, or may be heated for even faster dry. TM2152 and TM2153 conform to current requirements In-Lieu of Federal Specification TT-P-1952E Types I and II, and TT-P-1952F Types I and II. They will dry to no pickup in less than ten minutes when properly applied at ambient conditions, or one to two minutes when heated to 140°F (60°C). High relative humidity has significantly less effect on the dry time of these products as compared to other latex paints.

For use on properly prepared:
- Cured asphalt, Concrete, Brick, Parking lots, Curbs, Runways

**Recommended use for in:**
- Apartments, Shopping Centers, Shopping Centers, Municipalities, State DTOS. Property Maintenance, Asphalt Seal Contractors, Pavement Stripers, Airfields & highways

**Finish:** Flat

**Color:** White, Yellow, Black

**Recommended Spreading Rate:** Approximately 320 lineal feet of standard 4 inch stripe per gallon

**Rate per coat:** 15 ft.

**Dry mils:** 9.1

**Coverage sq. ft. per gallon:** 107

**Theoretical coverage sq. ft. per gallon:** 978

**Spreading rates are calculated on volume solids and do not include an application loss factor due to surface profile, roughness or porosity of the surface, method of application, surface irregularities, overthinning, climatic conditions, and excessive film build.**

**Drying Schedule @ 15.0 mils wet, @77°F (25°C), @50% RH:**

- **Dry-no-pickup:** 10 minutes
- **Dry to touch:** 10 minutes

**Drying time is temperature, humidity, and film thickness dependent.**

**Tinting:** Do Not Tint

**VOC (less exempt solvents):**

- 87 grams per litre; 0.72 lbs. per gallon (White)
- 86 grams per litre; 0.72 lbs. per gallon (Yellow)
- As per 40 CFR 59.406

**Volume Solids:**

- 61 ± 2% (White)
- 61 ± 2% (Yellow)
- 61 ± 2% (Black)

**Weight Solids:**

- 78 ± 2% (White)
- 77 ± 2% (Yellow)
- 77 ± 2% (Black)

**Weight per Gallon:**

- 14.10 lbs. (White)
- 13.72 lbs. (Yellow)
- 13.79 lbs. (Black)

**Flash Point:** 150°F (PMCC)

**Shelf Life:** 12 months, unopened

**Store indoors at 50°F (10°C) to 110°F (43.3°C)**

## Compliance

**As of 06/25/2020, Complies with:**

- **OTC**
- **OTC Phase II**
- **SCAQMD**
- **CARB**
- **CARB SCM 2007**
- **Canada**
- **LEED® v4 & v4.1 Emissions**
- **LEED® v4 & v4.1 VOC**
- **EPD-NSF® Certified**
- **MIR-Product Lens Certified**
- **MPI®**

## Application

**Temperature:**

- **minimum:** 50°F / 10°C
- **maximum:** 110°F / 43°C

**Relative humidity:** 85% maximum

The following is a guide. Changes in pressures and tip sizes may be needed for proper spray characteristics. Always purge spray equipment before use with listed reducer. Any reduction must be compatible with the existing environmental and application conditions.

**Reducer:** Water

As needed up to 12.5% by volume

**Airless Spray Line Striper:**

- **Pressure:** 1800-2700 p.s.i.
- **Hose:** 1/4-3/8 inch ID
- **Tip:** .015-.019 inch
- **Filter:** 60 mesh

**Conventional Spray Line Striper:**

- **Gun:** Binks 21 (Bleeder)
- **Fluid Nozzle:** #68
- **Air Nozzle:** Internal mix, #709
- **Atomization Pressure:** 20-80 p.s.i.
- **Fluid Pressure:** 30-60 p.s.i.

**NOTE:** Fluid and atomization pressures are dependent on environmental conditions. Use the lowest pressures necessary to achieve a “flat line”.

**Brush & Roller:**

- **As needed up to 12.5% by volume**

**Mixing Instructions:** Mix paint thoroughly to a uniform consistency with low speed power agitation prior to use.

**It can also serve as a binder for glass beads to make reflective markings. Apply by dropping on glass beads while the paint is still wet. Can be used with stencils (Available through Sherwin-Williams) for street and parking lot marking.**

## Recommended Systems

**Cured Asphalt, Concrete, and Brick:**

- 1 coat Hotline® Fast Dry Latex Waterborne Traffic Marking Paint @ 320 lineal feet of standard 4 inch stripe per gallon, approximately 15.0 mils wet, 9.1 mils dry.

- **White:** 0.0TM2152
- **Yellow:** 0.0TM2153
- **Black:** 0.0TM2221

**Application Tips**

Make sure product is completely agitated (mechanically or manually) before use.

**Mixing Instructions:** Mix paint thoroughly to a uniform consistency with low speed power agitation prior to use.
## SURFACE PREPARATION

**WARNING!** Removal of old paint by sanding, scraping or other means may generate dust or fumes that contain lead. Exposure to lead dust or fumes may cause brain damage or other adverse health effects, especially in children or pregnant women. Controlling exposure to lead or other hazardous substances requires the use of proper protective equipment, such as a properly fitted respirator (NIOSH approved) and proper containment and cleanup. For more information, call the National Lead Information Center at 1-800-424-LEAD (in US) or contact your local health authority.

Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.

Minimum recommended surface preparation:
- **Concrete:** Cured, clean, dry, sound
- **Asphalt:** Cured, clean, dry, sound
- **Brick:** Cured, clean, dry, sound

Surfaces should be clean and dry and free from loose or peeling paint. Do not apply when air or surface temperatures are below 50°F (10°C), or when the relative humidity exceeds 85%, or when the temperature falls below the dew point.

The presence of concrete sealers or efflorescence on new concrete may interfere with adhesion and should be removed by extended weathering, etching, or abrasive blasting.

Most previously painted lines may be repainted without additional surface preparation, provided the old paint is still tightly adhered to the surface. However, multiple layers of paint will eventually peel and require removal. Recognize that any surface preparation short of total removal of the old coating may compromise the service length of the system.

New asphalt surfaces should ideally be allowed to age several months before striping. Latex paint will not bleed on most asphalt surfaces; however, shrinkage of the paint film during curing can cause new asphalt to lift or crack. Exceeding the recommended film thickness will increase the tendency to cause asphalt lifting. Placing an inconspicuous test stripe to determine if a new asphalt surface has cured sufficiently to paint is recommended.

If it is necessary to paint new asphalt surfaces, do not exceed an application rate of 8 mils wet (approximately 200 sq. ft. per gallon). Special care should be given to laps and edges of stencils to prevent excessive film thickness.

## PERFORMANCE TIPS

**Asphalt surfaces generally require aging prior to painting.** If the asphalt is insufficiently cured, applying a thin coat (approximately 1/2 the recommended dft) generally reduces the extent of lifting and cracking.

No painting should be done immediately after a rain or during foggy weather.

Do not paint on wet surfaces.

Check adhesion by applying a test strip to determine the readiness for painting.

Do not use on uncured asphalt, asphalt surfaces generally require aging prior to painting.

Excessive reduction of material can affect film build, appearance, and adhesion.

The coating may be made into reflective paint by dropping on glass beads while the paint is still wet.

## SAFETY PRECAUTIONS

Refer to the Safety Data Sheets (SDSs) before use.

**FOR PROFESSIONAL USE ONLY.**

Published technical data and instructions are subject to change without notice. Contact your Sherwin-Williams representative for additional technical data and instructions.

Painted surfaces can become slippery when wet. Zone Marking paints are not intended for use as floor paints, and should not be used to paint large areas subject to pedestrian traffic. For instance, painting an entire traffic stall is not recommended.

## CLEANUP INFORMATION

Clean spills, spatters, hands and tools immediately after use with soap and warm water. After cleaning, flush spray equipment with compliant cleanup solvent to prevent rusting of the equipment. Follow manufacturer’s safety recommendations when using solvents.
